Subject Index

Absorption
  Crack resistance
    Poly(aryl ether ketone), 613–618
Acoustic measurements
  Entanglements
    Nuclear magnetic resonance, 2081–2086
Acrylamide
  Polymerization
    Branching, 134–137
    Kinetics, 128–133
Acrylamide copolymers
  Hydrolysis
    Kinetics, 860–870
  Metallo-polymer
    Nuclear magnetic resonance, 845–850
  Phase separation
    Aluminium ion, 851–859
  Viscosity
    Micellar copolymerization, 731–739
Acrylate
  Photopolymerization
    Oxygen scavenger, 18–23
  Polymerization
    Laser nephelometry, 1569–1574
Acrylonitrile
  Copolymer
    Nuclear magnetic resonance, 909–913
Activation energy
  Poly(ethylcarbazolyle)methane
    Conductivity, 746–751
Adhesion
  Polyimide
    Diffusion, 1807–1811
Adsorption
  Dielectric relaxation
    Surface reaction, 1594–1597
Ageing
  Block copolymers
    Graze growth, 1240–1244
  Creep
    Polypropylene, 2159–2169
  Crosslink density
    Network, 1812–1817
  Oriented polymer
    Relaxation, 418–425
  Poly(vinyl acetate)
    Structural relaxation, 483–489
  Polyacetylene
    Conducting polymers, 296–302
  Polyisoprene
    Ziegler–Natta catalyst, 713–715
  Polypropylene
    Transport properties, 1118–1123
  Solvent effects
    Thin coatings, 1266–1272
Aggregates
  Gels
    Poly(vinyl chloride) 30–36
Aluminium ion
  Acrylamide copolymers
    Phase separation, 851–859
Aminolysis
  Poly(hydroxyalkyl glutamines)
    Kinetics, 2072–2075
Anionic groups
  Random copolymer
    Polyelectrolytes, 716–723
Anionic polymerization
  Block copolymers
    Characterization, 1528–1534
  Electron transfer
    Kinetic theory, 584–590
Anisotropy

Kinetic study
Vinylanthracene
Electrochemical polymerization, 1329–1334
Kinetic theory
Anionic polymerization
Electron transfer, 584–590
Cationic polymerization
Molecular weight distribution, 924–928
Polymer chains
Microstructure, 1858–1866
Kinetics
Acrylamide
Polymerization, 128–133
Acrylamide copolymers
Hydrolysis, 860–870
Blend
Styrene, 2056–2060
Emulsion polymerization
Particle size distribution, 545–552
Glassy polymer
Orientation, 99–105
Methyl methacrylate
Modelling, 2221–2228
Photopolymerization
Thermal stability, 448–456
Poly(hydroxyalkyl glutamines)
Aminolysis, 2072–2075
Poly(phenylene sulphide)
Crystallization, 106–113
Polybenzazoles
Rod-like polymer, 1307–1312
Polysulphides
Crystallization, 2076–2080
Polyurethane
Interpenetrating networks, 346–350

Lamellar morphology
Poly(aryl ether ether ketone)
Crystallization, 1745–1754
Polyethylene
Melt crystallization, 1539–1543
Polystyrene
Isotacticity, 904–908
Laser nephelometry
Acrylate
Polymerization, 1569–1574
Latex films
Dielectric relaxation
Microstructure, 311–319
Ligands
Polybutadiene
Neodymium catalysts, 1516–1521
Light scattering
Copolymer blends
D.s.c., 686–690

Crystallization
Poly(ethylene oxide), 2121–2125
Poly(phenyl acrylate)
Interpenetration, 1590–1593
Polystyrene
Solution properties, 1301–1306
Viscometry
Gels, 2249–2260
Lignin
Poly(methyl methacrylate)
Blends, 1021–1029
Poly(vinyl alcohol)
Blends, 1030–1036
Liquid crystalline polymer
Polyesters
Crystal structure, 597–604
Spacer group, 1128–1130
Random copolymer
Modelling, 207–223
Liquid crystals
Polyesters
X-ray diffraction, 1459–1467
Polysiloxane
Spacer group, 1318–1322

Maleic anhydride
Homopolymerization
Nuclear magnetic resonance, 880–882
Mannich bases
Characterization
Synthesis, 771–788
Mass spectrometry
Polycarbonate
Chemical modification, 998–1003
Mechanical behaviour
Ionomers
Graft copolymers, 1216–1220
Polyethylene
Ethylene copolymers, 43–48
Mechanical damping
Deformation
Polycarbonate, 641–645
Mechanical properties
Block copolymers
Morphology, 195–206
Glassy polymer
Relaxation, 1347–1353
High performance fibres
Anisotropy, 1091–1094
Morphology, 1354–1364
Hydrogels
Surface studies, 2191–2202
Poly(vinyl pyrrolidone)
Hydrogels, 701–706
Polycarbonate
Annealing, 1985–1989
Polypropylene blends
Viscosity, 1761–1767
Polystyrene
Composites, 1255–1265
Polythiophene
Conducting polymers, 1161–1165
Polyurethane
Poly(methyl methacrylate), 37–42
Solid-state polymerization
Urethane copolymers, 370–375
Mechanical relaxation
Viscosity
Elastic modulus, 541–544
Melt
Blend
Morphology, 1598–1602
Melt crystallization
Polyethylene
Lamellar morphology, 1539–1543
Melt dynamics
Polyethylene
Nuclear spin relaxation, 1951–1959
Melt viscosity
Polystryene
Rheology, 646–650
Melting
Glass transition temperature
Degradation, 2229–2234
Nylon
Gel permeation chromatography, 1635–1642
Poly(ethylene terephthalate)
Orientation, 894–897
Melting behaviour
Polyethylene
Morphology, 1929–1934
Membrane
Diffusion
Gas permeability, 2041–2049
Metallic neutralization
Ionomer structure
EXAFS, 173–176
Metallo-polymer
Acrylamide copolymers
Nuclear magnetic resonance, 845–850
Methanol transport
Poly(methyl methacrylate)
Deformation, 1221–1226
Methyl methacrylate
Copolymerization
Dynamic mechanical analysis, 981–986
Kinetics
Modelling, 2221–2228
Methyl vinyl ketone
Copolymerization
End groups, 1867–1870
Micellar copolymerization
Acrylamide copolymers
Viscosity, 731–739
Micelle
Small-angle neutron scattering
Rheology, 1968–1978
Microstructure
Block copolymers
Electron microscopy, 387–395
Copolymer
Nuclear magnetic resonance, 144–151
Isomerism
Poly(vinyl fluoride), 168–172
Kinetic theory
Polymer chains, 1858–1866
Latex films
Dielectric relaxation, 311–319
Miscibility
Blend
Characterization, 1831–1842
Polyamides, 2015–2026
Block copolymers
Blends, 1233–1239
Excimer fluorescence
Chain conformation, 1625–1634
Poly(aryl ether ketone)
Blends, 1016–1020
Poly(vinyl acetate)
Hydrolysis, 1694–1698
Polyurethane
Blends, 1659–1663
Miscibility studies
Blends
D.s.c., 477–482
Polystyrene blends
D.s.c., 1227–1232
Ternary blends
Glass transition temperature, 1052–1057
Mobility probe
Nylon films
Electron spin resonance, 93–98
Poly(propylene oxide)
Excimer fluorescence, 251–255
Modelling
Crystalline polymer
Growth kinetics, 1755–1760
Liquid crystalline polymer
Random copolymer, 207–223
Methyl methacrylate
Kinetics, 2221–2228
Poly(propylene glycol)
Entanglements, 1198–1202
Molecular dynamics
Poly(vinyl acetate)
Electron spin resonance, 1282–1286
Molecular mobility
Poly(epichlorohydrin)
N.m.r. spectroscopy, 1689–1693
Molecular structure
Copolymer
X-ray diffraction, 1389–1396
Molecular weight distribution
Cationic polymerization
Kinetic theory, 924–928
Morphology
Blend
Melt, 1598–1602
Block copolymers
Mechanical properties, 195–206
Structure–property, 833–844
FT infra-red spectroscopy
Resin, 1793–1800
Halato-telechelic polymers
Viscoelasticity, 1203–1210
High performance fibres
Mechanical properties, 1354–1364
Nylon-rubber blend
Impact toughness, 1441–1446
Poly(butylene terephthalate)
Small-angle X-ray scattering, 1166–1170
Poly(ethylene oxide)
Crystal growth, 1603–1607
Polyester
Oriented film, 789–792
Polyethylene
Blend, 1037–1044
Melting behaviour, 1929–1934
Polyimide
Curing, 1191–1197
Polyoxymethylene
Characterization, 797–801
Multiresponse estimation
Dielectric constant
Statistical design, 325–328

N-protection
Polymer conformation
Optical activity, 1943–1950
N.m.r. spectroscopy
Chloroprene
Copolymerization, 1683–1688
Copolymer
Aryl ether sulphone, 1110–1117
Chloroprene, 1495–1500
Stereoregularigy, 2208–2215
Ethylene–propylene copolymer
Sequence distribution, 1848–1857
Isopropyloxirane
Cationic polymerization, 1335–1337
Paints
Stoving alkyds, 1501–1506
Poly(epichlorohydrin)
Molecular mobility, 1689–1693
Polyacrylates
Crosslinking, 1338–1342
Nematic structure
Thermotropic polyesters
Tensile properties, 1095–1100
Neodymium catalysts
Polybutadiene
Ligands, 1516–1521
Network
Crosslink density
Ageing, 1812–1817
Networks
Dynamic mechanical properties
Strain, 2203–2207
Hydrophilic
Hydrophobic, 1071–1078
Poly(dimethylsiloxane)
Orientation, 1171–1178

Poly(ethylene oxide)
Telechelics, 1064–1070
Polyacrylamide
Elongational flow, 1179–1190
Relaxation
Theoretical model, 2027–2032
Thermoviscoelasticity
Gaussian theory, 292–295
Neutron scattering
Polydispersity
Small-angle scattering, 1555–1561
Neutron transmission
Polymer-solvent interaction
Critical point, 1010–1015
Nitrocellulose
Plasticization
Glass transition, 919–923
Nuclear magnetic resonance
Acrylamide copolymers
Metallo-polymer, 845–850
Acrylonitrile
Copolymer, 909–913
Copolymer
Glass transition, 2244–2248
Microstructure, 144–151
Dextran
Degree of substitution, 507–512
Entanglements
Acoustic measurements, 2081–2086
Maleic anhydride
Homopolymerization, 880–882
Poly(vinyl alcohol)
Crosslinking, 336–340
Pllybutadiene
Polyethylene, 883–893
Polypropylene
Configuration, 138–143
Nuclear spin relaxation
Polyethylene
Melt dynamics, 1951–1959
Nucleation
Crystallization
Small-angle scattering, 1990–1994
Nucleophilic displacement
Poly(arylene ethers)
Copolymerization, 358–369
Nylon
Melting
Gel permeation chromatography, 1635–1642
Polyamidation
Water accumulation, 114–117
Nylon films
Electron spin resonance
Mobility probe, 93–98
Nylon–rubber blend
Morphology
Impact toughness, 1441–1446

Optical activity
Polymer conformation
N-protection, 1943–1950
Optical interferometry
Crazing
Poly(methyl methacrylate), 1615–1618
Optical properties
Poly(styrene sulphonate)
Relaxation, 160–167
Synthesis
Film, 2141–2145
Orientation
Deformation
Polymer networks, 1823–1826
Film
Wave mixing, 1940–1942
Glassy polymer
Kinetics, 99–105
Poly(dimethylsiloxane)
Networks, 1171–1178
Poly(ethylene terephthalate)
Fluorescence spectroscopy, 437–447
Melting, 894–897
Polybutadiene networks
Infra-red dichroism, 1155–1160
Polyisoprene
Fluorescence polarization, 1818–1822
Oriented film
Morphology
Polyester, 789–792
Oriented polymer
Ageing
Relaxation, 418–425
Poly(ethylene terephthalate)
Raman spectroscopy, 2146–2151
Polyacetylene
Film, 1101–1104
Viscoelasticity
Thermal properties, 619–625
Osmotic pressure
Dextran
Ternary systems, 535–540
Oxidation
Polyethylene
Photodegradation, 1277–1281
Oxygen scavenger
Acrylate
Photopolymerization, 18–23

Paints
N.m.r. spectroscopy
Stoving alkyds, 1501–1506
Particle size distribution
Emulsion polymerization
Kinetics, 545–552
Partition coefficient
Self-avoiding walks
Scaling, 1664–1668
Percolation theory
Blends
Rubber, 2170–2173
Permeability
Poly(hydroxyethyl methacrylate)
Hydrogels, 1879–1886
Perturbation
Elastomer
Glassy polymer, 405–409
Phase behaviour
Polystyrene
Coexistence curve, 2061–2065
Phase diagram
Polyethylene
Interaction parameter, 656–660
Phase separation
Acrylamide copolymers
Aluminium ion, 851–859
Polymer solutions, 118–122
Viscoelasticity
Blend, 1643–1647
Photochromism
Rayleigh scattering
Refractive index, 2261–2270
Photoconductivity
Poly(ethylcarbazolyle methane)
Doping, 752–755
Photodegradation
Curing
Stability, 1575–1580
Polyethylene
Oxidation, 1277–1281
Photogeneration
Doping
Film, 1655–1658
Photoinitiation
Photopolymerization
Exciplexes, 2033–2040
Photopolymerization
Acrylate
Oxygen scavenger, 18–23
Complexes
Hydrogen bonding, 2285–2289
Photoinitiation
Exciplexes, 2033–2040
Thermal stability
Kinetics, 448–456
Physical ageing
Block copolymers
Toughness, 1245–1254
Elastomer
Glassy polymer, 396–404
Plastic deformation
Fracture
Crack propagation, 1979–1984
Polyethylene
Water tree propagation, 376–379
Polypropylene blends
Wide-angle X-ray scattering, 963–969
Yielding
Epoxy resin, 808–813
Plasticization
Nitrocellulose
Glass transition, 919–923
Poly(vinyl chloride)
Irradiation, 1935–1939
Poly(ethylcarbazolyle)methane
Conductivity
Activation energy, 746–751
Poly(3,3-dimethyloxetane)
Vibrational spectroscopy
Coordinate analysis, 661–672
Poly(aryl ether ether ketone)
Crystallization
Lamellar morphology, 1745–1754
Poly(aryl ether ketone)
Blends
Miscibility, 1016–1020
Crack resistance
Agsorption, 613–618
Poly(aryl ether ether ketone)
Spin-lattice relaxation
Thermoplastic, 341–345
Poly(arylene ethers)
Copolymerization
Nucleophilic displacement, 358–369
Poly(benzyl glutamate)
Block copolymers
Polystyrene, 1513–1515
D.s.c.
Gels, 1426–1432
Poly(butylene terephthalate)
Small-angle X-ray scattering
Morphology, 1166–1170
Poly(diethyl oxetane)
Crystal structure
X-ray diffraction, 224–228
Blends
Viscosity, 1455–1458
Crosslinking
Copolymer, 2095–2099
Cyclic polymers
Viscosity, 1452–1454
Orientation
Networks, 1171–1178
Poly(dimethylsiloxanes)
Cyclic polymers
Conformation, 14–17
Poly(epichlorohydrin)
Molecular mobility
N.m.r. spectroscopy, 1689–1693
Poly(ether ketone)
Synthesis
Aromatic polymer, 1902–1908
Poly(ether sulphone)
Thermotropic polyesters
Synthesis, 938–949
Poly(ethylcarbazolyle methane)
Photoconductivity
Doping, 752–755
Poly(ethylene glycol)
Electrical resistance
Self-temperature control, 526–534
Poly(ethylene oxide)
Chain folding
Crystal growth, 579–583
Crystal growth
Morphology, 1603–1607

Crystallization
Light scattering, 2121–2125
Networks
Telechelics, 1064–1070
Polyhydroxybutyrate
Blends, 1731–1737
Poly(ethylene terephthalate)
Annealing
Thermoluminescence, 286–291
Crystal modulus
Fibre, 61–69
Crystal structure
Drawing, 2115–2120
Crystallization
Transport properties, 1468–1484
Fatigue
Crack propagation, 1433–1440
Fluorescence spectroscopy
Orientation, 437–447
Orientation
Melting, 894–897
Oriented polymer
Raman spectroscopy, 2146–2151
Relaxation
Thermally stimulated discharge, 1738–1744
Stress
Birefringence, 54–60
Poly(hydroxyalkyl glutamines)
Aminolysis
Kinetics, 2072–2075
Poly(hydroxyethyl acrylate)
Water sorption
Dielectric relaxation, 1124–1127
Poly(hydroxyethyl methacrylate)
Hydrogels
Permeability, 1879–1886
Transport properties, 1887–1893
Poly(methyl methacrylate)
Craze initiation
Fracture toughness, 634–640
Crazing
Optical interferometry, 1615–1618
Deformation
Methanol transport, 1221–1226
Glass transition
Water, 1871–1878
Lignin
Blends, 1021–1029
Poly(vinyl chloride)
Blends, 86–92
Polystyrene
Surface studies, 2277–2284
Resists
Solvent system, 2130–2135
Solution properties
Chain flexibility, 1898–1901
Poly(oxymethylene)
Crystal growth
Spectroscopy, 351–357
Poly(*p*-phenylene vinylene)
Blends
Electrical properties, 1412–1417
Poly(phenyl acrylate)
Light scattering
Interpenetration, 1590–1593
Poly(phenylene sulphide)
Crystal structure
Electron diffraction, 224–228
Crystallization
Kinetics, 106–113
Poly(propylene glycol)
Entanglements
Modelling, 1198–1202
Poly(propylene oxide)
Excimer fluorescence
Mobility probe, 251–255
Fluorescence anisotropy decay
Viscoelasticity, 245–250
Glassy polymer
Dielectric relaxation, 303–310
Poly(styrene sulphonate)
Optical properties
Relaxation, 160–167
Poly(tetrafluoroethylene)
Film
Surface polaritons, 821–824
Poly(vinyl acetate)
Ageing
Structural relaxation, 483–489
Miscibility
Hydrolysis, 1694–1698
Molecular dynamics
Electron spin resonance, 1282–1286
Poly(vinyl alcohol)
Lignin
Blends, 1030–1036
Nuclear magnetic resonance
Crosslinking, 336–340
Polyenes
Spectroscopy, 24–29
Sol–gel transition
Complexes, 2066–2071
Poly(vinyl carbazole)
Electrochemical polymerization
Fluorimetry, 929–933
Poly(vinyl chloride)
Crack propagation
Fatigue, 277–285
Stress, 268–276
Gels
Aggregates, 30–36
Irradiation
Plasticization, 1935–1939
Poly(methyl methacrylate)
Blends, 86–92
Viscoelasticity
Beta process, 1507–1512
Complex plane, 70–77
Poly(vinyl fluoride)
Isomerism
Microstructure, 168–172
Poly(vinyl methyl ether)
Polystyrene
Blend, 2002–2014
Poly(vinyl pyridine)
Block copolymers
Interaction parameter, 329–335
Poly(vinyl pyrrolidone)
Hydrogels
Mechanical properties, 701–706
Polyacetylene
Conducting polymers
Ageing, 296–302
Film
Oriented polymer, 1101–1104
Polyacrylamide
Elongational flow
Networks, 1179–1190
Gels
Diffusion, 1058–1063
Solution properties
Birefringence, 2182–2190
Polyacrylates
Crosslinking
N.m.r. spectroscopy, 1338–1342
Polyamidation
Water accumulation
Nylon, 114–117
Polyamide
Composite matrix
Synthesis, 1699–1703
Rubber
Grafting, 1418–1426
Polyamides
Blend
Miscibility, 2015–2026
Fracture
Crack growth, 2152–2158
Polybenzazoles
Rod-like polymer
Kinetics, 1307–1312
Polybutadiene
Frictional coefficient
Glass transition temperature, 1789–1792

Diffusion coefficient, 1313–1317
Gelation
Glass transition, 1378–1388
Tacticity, 898–903
Isotacticity
Lamellar morphology, 904–908
Melt viscosity
Rheology, 646–650
Phase behaviour
Coexistence curve, 2061–2065
Poly(methyl methacrylate)
Surface studies, 2277–2284
Poly(vinyl methyl ether)
Blend, 2002–2014
Solution properties
Light scattering, 1301–1306
Star polymer
Chain branching, 680–685
Polystyrene blends
Miscibility studies
D.s.c., 1227–1232
Polysulphides
Crystallization
Kinetics, 2076–2080
Polythiophene
Conducting polymers
Mechanical properties, 1161–1165
Film
Conducting polymers, 1522–1527
Polyurethane
Blends
Miscibility, 1659–1663
Cycloalkyl rings
Glass transition, 934–937
Ionomers
Emulsion, 1995–2001
Kinetics
Interpenetrating networks, 346–350
Mechanical properties
Poly(methyl methacrylate), 37–42
Polyurethane networks
Blends
Characterization, 1365–1377
Cyclization
Statistical analysis, 914–918
Synthesis
Dynamic mechanical analysis, 1079–1085
Porous structure
Polymerization
Terpolymers, 1137–1141
Pyrene
Synthesis
Characterization, 1718–1723

Raman spectroscopy
Poly(ethylene terephthalate)
Oriented polymer, 2146–2151
Polyoxymethylene
Tnesile stress, 1768–1778
Random copolymer
Anionic groups
Polyelectrolytes, 716–723
Liquid crystalline polymer
Modelling, 207–223
Rayleigh scattering
Photochromism
Refractive index, 2261–2270
Redox system
Polypyrrole
Characterization, 1709–1717
Refined model
X-ray diffraction
Polypivalolactone, 1586–1589
Refractive index
Photochromism
Rayleigh scattering, 2261–2270
Relaxation
Ageing
Oriented polymer, 418–425
Crystalline polymer
Soliton model, 987–997
Glassy polymer
Mechanical properties, 1347–1353
Networks
Theoretical model, 2027–2032
Poly(ethylene terephthalate)
Thermally stimulated discharge, 1738–1744
Poly(styrene sulphonate)
Optical properties, 160–167
Polyhydroxyether
Acetylation, 320–324
Resin
Morphology
FT infra-red spectroscopy, 1793–1800
Resists
Poly(methyl methacrylate)
Solvent system, 2130–2135
Rheological properties
Polyelectrolytes
Complexation, 1105–1109
Rheology
Micelle
Small-angle neutron scattering, 1968–1978
Polystyrene
Melt viscosity, 646–650

Rigid rod polymer
Composites
Thermoplastic, 825–828
Rod-like polymer
Polybenzazoles
Kinetics, 1307–1312
Rubber
Blends
Percolation theory, 2170–2173
Polyamide
Grafting, 1418–1426
Tread
Tyre, 1801–1806
Rubber elasticity
Polyethylene networks
Irradiation, 970–974

Scaling
Self-avoiding walks
Partition coefficient, 1664–1668
Solution properties
Diffusion, 1294–1300
Self-avoiding walks
Scaling
Partition coefficient, 1664–1668
Self-temperature control
Poly(ethylene glucol)
Electrical resistance, 526–534
Sequence distribution
Ethylene–propylene copolymer
N.m.r. spectroscopy, 1848–1857
Shear
Thermotropic polyesters
Extrusion, 605–612
Shear viscosity
Solution properties
Expansion, 1287–1293
Single crystal mat
Polyethylene
Ultra-high modulus, 814–820
Small-angle X-ray scattering
Poly(butylene terephthalate)
Morphology, 1166–1170
Polyelectrolytes
Counterion condensation, 2216–2220
Small-angle neutron scattering
Micelle
Rheology, 1968–1978
Small-angle scattering
Crystallization
Nucleation, 1990–1994
Polydispersity
Neutron scattering, 1555–1561
Sol-gel transition
Complexes
Poly(vinyl alcohol), 2066–2071
Solid-state n.m.r.
Polyisoprene
Conformation, 240–244
Solid-state polymerization
Urethane copolymers
Mechanical properties, 370–375
Soliton model
Crystalline polymer
Relaxation, 987–997
Polyethylene
Computer simulation, 256–262
Solution properties
Bisphenol-A polymer
Temperature effects, 1894–1897
Diffusion
Scaling, 1294–1300
Poly(methyl methacrylate)
Chain flexibility, 1898–1901
Polyacrylamide
Birefringence, 2182–2190
Polystyrene
Light scattering, 1301–1306
Shear viscosity
Expansion, 1287–1293
Viscosity
Cyclic polymer, 1648–1654
Solvent effect
Polymer solutions
Viscosity, 490–499
Solvent effects
Thin coatings
Ageing, 1266–1272
Solvent system
Poly(methyl methacrylate)
Resists, 2130–2135
Sorption
Enthalpy
Copolymer, 2050–2055
Spacer group
Liquid crystals
Polysiloxane, 1318–1322
Polyesters
Liquid crystalline polymer, 1128–1130
Spectroscopy
Poly(oxymethylene)
Crystal growth, 351–357
Poly(vinyl alcohol)
Polyenes, 24–29
Spherulitic morphology
Isotacticity
Polypropylene, 591–596
Polystyrene
Crystallization, 1397–1401
Spin-lattice relaxation
Poly(aryl ether ether ketone)
Thermoplastic, 341–345
Spinning
Polyethylene fibres
Crystallization, 1211–1215
Stability
Curing
Photodegradation, 1575–1580
Star polymer
Polystyrene
Chain branching, 680–685
Statistical analysis
Polyurethane networks
Cyclization, 914–918
Statistical design
Dielectric constant
Multiresponse estimation, 325–328
Stereoisomers
Haloaldehyde polymers
Gas chromatography, 707–712
Stereoregularity
Copolymer
N.m.r. spectroscopy, 2208–2215
Stoving alkyds
N.m.r. spectroscopy
Paints, 1501–1506
Strain
Networks
Dynamic mechanical properties, 2203–2207
Stress
Deformation
Polycarbonate, 1619–1624
Poly(ethylene terephthalate)
Birefringence, 54–60
Poly(vinyl chloride)
Crack propagation, 268–276
Viscoelastic polymers
Structural relaxation, 1784–1788
Stress distribution
Polyethylene
Crazing, 463–466
Stress-cracking
Ethylene copolymers
Thermal properties, 829–832
Structural relaxation
Elastomer
Glassy polymer, 410–417
Poly(vinyl acetate)
Ageing, 483–489
Viscoelastic polymers
Stress, 1784–1788
Structure
Copolyester
Thefmal stability, 518–525
Styrene/acrylates
Copolymer, 1675–1682
Vibrational spectroscopy
Isotactivity, 1843–1847
Structure–property
Block copolymers
Morphology, 833–844
Styrene
Blend
Kinetics, 2056–2060
Zinc acrylate
Ionomer structure, 1581–1585
Styrene/acrylates
Copolymer
Structure, 1675–1682
Electron beam resists
Comb copolymers, 1407–1411
Polymerization
Composition, 2987–2094
Surface polaritons
Poly(tetrafluoroethylene)
Film, 821–824
Surface reaction
Dielectric relaxation
Adsorption, 1594–1597
Surface studies
Hydrogels
Vinyl pyrrolidone, 691–700
Polystyrene
Poly(methyl methacrylate), 2277–2284
Surface swelling kinetics
Glassy polymer
Diffusion, 673–679
Suspension polymerization
Electron paramagnetic resonance
Styrene/divinyl benzene, 500–506
Swelling behaviour
Polymer networks
Interaction parameter, 1086–1090
Synthesis
Block copolymers
Flame retardent polymers, 1909–1917
Free radical polymerization, 950–957
Characterization
Copolymer, 9157
Pyrene, 1718–1723
Film
Electron beam irradiation, 2136–2140
Mannich bases
Characterization, 771–788
Optical properties
Film, 2141–2145
Poly(ether ketone)
Aromatic polymer, 1902–1908
Poly(ether sulphone)
Thermotropic polyesters, 938–949
Polyamide
Composite matrix, 1699–1703
Polyisophthalamides
Thermal degradation, 1142–1145
Polyphosphates
Characterization, 756–764
Polypyrrole
Chlorination, 553–558
Polyurethane networks
Dynamic mechanical analysis, 1079–1085

Tacticity
Polystyrene
Gelation, 898–903
Telechelics
Networks
Poly(ethylene oxide), 1064–1070
Temperature effects
Bisphenol-A polymer
Solution properties, 1894–1897
Polyethylene
Dielectric relaxation, 263–267

Tensile properties
Thermotropic polyesters
Nematic structure, 1095–1100
Tensile strain
Polypropylene
Drawing, 233–239
Tensile stress
Polyoxymethylene
Raman spectroscopy, 1768–1778
Ternary blends
Miscibility studies
Glass transition temperature, 1052–1057
Ternary systems
Dextran
Osmotic pressure, 535–540
Terpolymers
Polymerization
Porous structure, 1137–1141
